Frigel introduces the Latest Developments in Cooling and Mold Temperature Control Solutions at CHINAPLAS-23 (Hall 10/ Booth J69)

Frigel continues to innovate solutions to increase profitability for global plastic processors looking to improve productivity, quality and sustainability KPIs.

FLORENCE, ITALY – 07 January 2023

Frigel Group is delighted to inform the participation at the annual plastics and rubber trade fair, this year held at **Shenzhen World Exhibition & Convention Center (PR China)**, April 17-20.

Frigel Asia Pacific team will host the **Booth J69, Hall 10 located inside the Italian Pavilion area**, will be displayed the latest update of Frigel Microgel Series, portable water chiller suitable for every plastic process type such as injection, blow-moulding, extrusion, technical moulding and multiple plastic application fields including automotive, packaging, medical, household appliance, industrial components.

Our Engineers will be happy to welcome your visit and answer to any inquiries you might have and provide their expertise in the cooling's field applied to the plastic process.

New machine-side solutions have been designed to ensure the maximum profitability and quickest ROI for the processor, leveraging productivity, product quality and process repeatability improvements. These solutions are the result of 30 years of experience and successful stories of process optimization, with a global organization bringing not just process cooling expertise, but a vast know-how in plastic processing and technology dynamics.

Driven by the fundamental purpose of "Engineering a more efficient and sustainable industry", Frigel is also introducing to the CHINAPLAS show some of its recent highlights in centralized system solutions. The recent advancements in its **patented Adiabatic cooling solutions reconfirm Frigel's position as product leader in this very important technology for water and energy savings in process cooling**. Modular, scalable and flexible Frigel central chiller solutions are also offering opportunities for global plastic companies to adopt industrial cooling solutions designed to be installed anywhere, with full engineering and service support, leveraging the recent advancements of Frigel Industry 4.0 controls and connectivity platforms.

MACHINE SIDE SOLUTIONS

(NEW) Microgel SYNCRO

Process synchronized mold temperature control technology with onboard chiller (Patent Pending)

Frigel introduces the **Microgel SYNCRO**, a new technology that revolutionizes the temperature control method of injection molding technical parts. The **Microgel Syncro technology** allows for a significant reduction in cycle time (up to 40%), guaranteeing very high product quality. Digitally synchronized with the molding process, **Microgel Syncro** provides cold water only during the cooling phase, reducing drastically the cooling time, while keeping the mold cavities hot during the injection phase. Independent, autonomous machine-side solution, simply synchronized with the molding process via single signal, Syncro technology is easy to implement and use, providing ROIs in less than 6 months.

The **Microgel SYNCRO** product line features more than 10 models, with cooling capacities from 16 kW to 56 kW and heating capacities from 12 kW to 24 kW.

MICROGEL RSY SYNCRO

Microgel RS Series

High performance Single and Dual Zone TCUs with Booster Pumps and Integrated Portable Chillers

Frigel releases the full range of *Microgel RS for Injection Molding*. These unique single zone (RSM) and dual zone (RSD) machine-side temperature control units are designed for molding throughputs ranging from 10 to 240 kg/hr (20 to 530 lb/hr). The new Microgel RS range includes important advancements in temperature accuracy over the entire control range (-5 to 90° C), functionalities, pumping performance and overall energy efficiency, all key factors in high performance mold cooling applications.

The RS range features additional configurations specifically designed for Packaging (RSP) and Extrusion (RSB). Options such as flow-meters, VFDs, return/remote temperature sensors are enabling full process control

capability. Its new user interface offers a flawless experience and full connectivity and interoperability via the Frigel MiND™ platform.

MICROGEL RSD

TURBOGEL RB Series

High performance Single and Dual Zone TCUs with Booster Pumps

The popular Frigel high performance booster TCU line is presented with upgraded digital control to allow full connectivity with MiND™ and other Industry 4.0 architectures. Designed with same goals and plastic process focus in mind, the Turbogel RB product range offers a wide spectrum of technical choices for productivity and process improvement for centralized cooling plants where control at the point of use is fundamental. Various equipment configurations are available including VFDs, increased heating capacities and SSR control, higher temperature ranges and customized pump selections based on mold-specific application data.

TURBOGEL RBD

THERMOGEL TDK Series

High precision Single Zone pressurized water TCUs

Frigel introduces advancements in its growingly popular direct injection pressurized water TCUs up to 120°C for applications in Automotive, Medical and any other Technical Molding sectors where accuracy, repeatability and process control are fundamental for the profitability of the IMM cell. The TDK units are fully adaptable to any molding condition and are equipped with reliable features and redundant safeties to operate over the entire temperature range. Flow meter options and connectivity to MiND™ or other *Industry 4.0* architectures are enabling complete process monitoring and data recording.

THERMOGEL TDK

CENTRALIZED SOLUTIONS

HEAVYGEL 3FA Series

Industrial air cooled high efficiency Modular Screw Compressor Chillers

Frigel completes its platform of Industrial Modular Chillers (3F series) with a new integral air cooled package chiller line, the 3FA range, featuring: high efficiency screw technology with VFD option, microchannel high performance condenser, EC fans for increased part load efficiency and low ambient temperature control, low GWP refrigerant option (R-513a), wide process and ambient temperature operating ranges, modular design with factory pre-engineered piping configuration and recirculation water package option.

The 3FA (air cooled integral package) offers the advantage of a quick and ready-to-deploy centralized chiller system solution, with minimal indoor equipment footprint, ideal in moderate climates, but also in cold climates when the use of water glycol mixtures is allowed.

The Ecodry Dry range and the Aquagel pump and tank packages complete a fully integrated system solution with maximum cooling performance efficiency and minimal environmental impact. The 3FA range features 7 models and 3 versions with capacities ranging from 170 kW to 600 kW for centralized expandable systems with capacities up to 3.500 kW.

HEAVYGEL 3FA

ECODRY MDK Series

Adiabatic Closed Loop Fluid Coolers with enclosed chambers and patented booster cooling technologies

Frigel expands its Adiabatic product family line, introducing the Ecodry MDK range, designed to allow the flexible configuration of modular adiabatic solutions for small to large plastic factories. MDK takes advantage of some of the technological advances already introduced in the LDK range (new efficient PADs, new generation of EC fans, modular design, wide and deep configuration).

MDK is characterized by a high efficiency humidification system (COOLPAD™) and by a new generation of EC fans which, combined with a more effective dry cooler, obtain a new level of compactness in a powerful new adiabatic cooler product line.

The new Ecodry MDK is designed to integrate easily into existing Ecodry 3DK systems, of which Frigel has an existing installation base of thousands of units, in addition to responding to the new needs of industries; energy efficiency, sustainability and saving of raw resources such as water.

ECODRY MDK HC

NETGEL 3PR 4.0

Industry 4.0 Intelligent Central System Control Platform

The 3PR 4.0 product platform is a dedicated Frigel solution that provides complete control of Frigel central cooling systems. 3PR 4.0 control meets the needs of processors to supervise and manage the whole cooling system from a single control point. All the connected central system components are controlled via a unique control panel that has been designed specifically for Frigel systems. 3PR 4.0 is available in two versions, Lite and Premium, depending on the size of the system and the equipment to control. Full native connectivity to MiND™ and its new HMI (*Human Machine Interface*) offer a flawless user experience and compatibility with Industry 4.0 architectures, providing easy visualization and process diagrams of the connected equipment, dashboards for main parameters, performance graphs and alarm management and history.

NETGEL 3PR 4.0 Premium

MiND™

Industry 4.0 central system and machine side Web Interface and Monitoring Platform

Frigel releases the MiND™ 2.0 platform, the evolution of its Industry 4.0 concept. MiND™ 2.0 is an innovative digital solution to meet the ever increasing needs of modern companies to reach *Industry 4.0* and *IIOT* (*Industrial Internet of Things*) standards. MiND™ 2.0 is now able to provide customers a perfect supervision and maintenance tool for all Frigel equipment and accessories, both central and machine-side, allowing for monitoring and management of all working parameters and events and registering performance and energy consumption of every single cooling system component through a multifunctional user interface, both locally and remotely, through a user-friendly webpage.

ABOUT THE FRIGEL GROUP

Frigel is much more than a manufacturer of cooling and temperature control systems. We are technical consultants with the ability to identify the best solutions, in terms of performance, efficiency, environmental impact and to calculate the return on investment for each individual application.

We offer solutions calibrated to the needs of each customer by studying innovative solutions, carefully designed and fully supported, to obtain the best results which are verifiable in terms of productivity, efficiency, quality and precision.

Seven production sites worldwide: Europe (Florence and Padua), America (USA), Asia (Thailand and India). Four commercial branches (Germany, Poland, Italy) and 51 distribution service points (a worldwide network of agents and distributors).

With more than 40 years of experience in industrial refrigeration, filled with innovative solutions and breakthrough technologies, Frigel has built a broad know how in different industry sectors and a solid position in the refrigeration market.

In Frigel, we are experts in refrigeration, but in our technical choices, there is always the premise of combining the improvement in performance with an indispensable reduction of the environmental impact. Sustainability is today a crucial principle of our ability to imagine and innovate. This is in Frigel's DNA.
